

CARD AND DICE ROLL NUMBER GAME

Source: Box Cars & One-Eyed Jacks

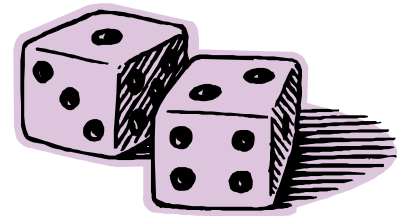

boxcarsandoneeyedjacks.com

Use cards 0-9 for this activity.

Each player draws 4 cards. For example, cards drawn were 6 5 7 2

Each player then rolls the dice four times and builds and verbalizes their number. (example 4263)

$4000 + 200 + 60 + 3$

Players now attempt to build a number with their cards that is closest to their rolled number.

Player would build 5267 - That is the closest they can build to 4263.

Players then compare whose card number was closest to their rolled number. The player closest to their rolled number takes all the other player's cards.

Try the above activity with rounding.

Players can round both their rolled numbers and their cards. Play the same rules. Player closest to their rolled number takes all of the cards.
